

Blue Bulbs come alive w/ the PlanetSafe DRL-2005 product...

If you already have blue turn signal bulbs, this product makes your vehicle more visible to others during daytime hours.

Much more visible than using parking lights and blue turn signal bulbs; Now, these radical 'turbocharged' blue bulbs really shine out

...as this system creates a more unique and safer vehicle!

SKEPTICS CORNER:

Right about now, you're probably asking yourself:

Does This Product Really Work?

The answer is: Yes, this product really does work, and is not a fluke or a cheap 'soon-to-break' toy. This is a high quality product, with built-in reliability and ruggedness. With this type of state-of-the-art technology influencing and controlling such low current consuming bulbs, this product should last and last! Operating at a fraction of its rated amperage carrying capacity, its engineering calculated life potentially approaches the expected life of most non-commercial vehicles. US Pat. 7019463 and other US and International patents pending.

The safety and quality designed into this product means peace-of-mind for the vehicle operator, now and down the road. No risk 60 day money back guarantee and lifetime warranty.

DO-IT-YOURSELF PERSONALIZATION THAT GRABS ATTENTION!

Devices in stock & made-to-order—for existing single filament, dual filament, multiple dual filament systems; even for LEDs.

Call Today 888-549-2153 to Order, or for More Info

Works with all 12 volt turn signal / hazard lighting systems on Cars, Motorcycles, and Trucks of any origin, any type, import or domestic...

The Highest Quality Turn Signal Bulb Energized DRL systems ever - starting at only \$139... designed and built to last.

Each system or module now comes with a lifetime warranty. These systems alone or when combined with LEDs can pay for themselves in fuel economy and bulb replacement savings over time when compared to white light systems.

Deluxe DRL Controller systems only \$199

Super Economical: Typical conventional-bulb system current consumption is about 4 amps. Realize more energy savings over white light systems when the target vehicle has been converted to front LED signal lamps! LED's have typically 1/10 the energy consumption of conventional bulbs. We also carry long-life *JamStrait*® brand LED bulbs and accessories...

Running Lighting
Technology that
separates your
Tuner 'from the
Multitudes'**

**You Gotta Get
the Look
that Gets
'The Look'...**

**Don't Leave
Home Without It**

A 'Tuner' Automotive Revolution is occurring in America today!

Some of the coolest cars in America today have looks that are far different from their original factory appearance. In generations past, a muscle car with a 400 horsepower engine is what it took for a young

person to be cool and 'stand out in the crowd'. Now, fuel efficient 'tuners' with a 400 'horsepower' stereo, high output engine, radical paint and custom graphics, lowered suspensions, wicked wheels, and extreme upgrades are what younger car enthusiasts want to express their individuality.

Yet a \$7000 Honda with \$8000 invested afterwards can disappear should 'Ms. Lady' or 'Mr. Man' inadvertently pull out in front of your vehicle and 'total out' your masterpiece. Also, the insurance companies rarely pay what this type vehicle is worth, in terms of time and money invested.

Now, Instant uniqueness and an updated look are available for your automotive 'work of art'.

AllQuality Introduces the PlanetSafe DRL-2005 Universal Turn Signal Daytime Running Lights (DRL) Controller Systems

(US Pat. 7019463 and other US and International patents pending)

The PlanetSafe DRL-2005 systems from AllQuality Custom Auto offer 21st century, state-of-the-art DRL/Fog lighting solutions that may turn out to be the safest and most revolutionary vehicular safety lighting device of the decade.

These products are not only designed for enhancement and control of your front turn signal bulbs, but they are also built with extensive quality and safety in mind. AllQuality Universal DRL safety products are the automotive safety product that every dealership in America should be offering—installed into your new car, truck, or motorcycle before you drive it off the lot.

In fog, snow, or other bad daytime weather situations, AllQuality systems can double as 'fog light' protection for maximum safety and visibility.

Cool Looks and Safety—Turbo Charge Your Turn Signals

News Flash: 14 major manufacturers with over 45 models already employ amber collision avoidance safety as OEM systems added at the factory: Now, you can enjoy the same safety for under \$140 per vehicle...

Before and After Pictures... and How This Technology Works

← Parking Lights 'On'

State of each Dual Filament Bulb:

Dim Filament = On, Constantly energized, headlight switch operated

Bright Filament = Off, pulse operated only by turn signal or hazards

NHTSA has ruled parking lights are 'too dim' to use as DRLs (too dim to be effective on sunny days)

HUMAN BEINGS HAVE BEEN CONDITIONED FOR OVER 50 YEARS THAT AMBER AUTOMOTIVE LIGHTING MEANS 'CAUTION!'

'04 Chrysler® 300® Sedan

LOWER-POWER AMBER TURN SIGNAL LIGHT GRABS HUMAN ATTENTION MUCH BETTER THAN HIGHER-POWER WHITE LIGHT!

Amber DRL Technology 'On'→

State of Dual Filament Bulb:

Dim Filament = Off

Bright Filament = On constantly, via ignition key switch, previously pulse or 'flash' operation only.

Turn Signal/Hazards operation unaffected; plus vehicle's bulb-failure indication system monitors the new DRL bulbs / all TS bulbs for burn out!

Headlight DRL systems don't do this!

'05 Mazda® '3' Sport Sedan, dual filament two-lamp turn signal system

Amber Lighting is PROVEN to stand out better in a 'white-washed' daylight world than white light, yet this technology consumes 1/2 to 3/4 less energy!

Turn Signal Bulb Energized Daytime Running Lights are the automotive safety trend of the future. Save up to 0.5 mpg over white light DRL types, and offers lower costs that even reduced power low beam headlight DRL types!
